1

mistake of tra	ining too ha	rd straight a	way and injur	ing themselve	s. You are tra	aining for an		
Endurance ev	ent and this	phase and th	ne next phase	are focused or	n preparing a	good BASE	for	
your body be	fore you inci	rease to race	intensity. So.	take it easy				
HEART RAT	E ZONES							
In the comme	ntary below	you will see	reference to	Heart Rate Zo	nes. Usually	Zones 1-5 a	re used or R	PE
(Rate of Perce	eived Exerti	on) 1-10. If y	you have had	a Lactate Thre	shold Test y	ou will know	your	
Heart Rate Tr	aining Zone	s.						
STRENGTH								
This period is	Anatomical	Adaptation.	Easy weight	. 50% of Max	- Core exerc	cises 3 reps o	f 15 - 20	
just getting yo	our muscles	and ligamen	ts ready for th	ne harder work	to come.			
Aerobic warn	n up for 10 r	ninutes before	re and cool do	own after exer	cises. Stretch	after (and e	very day).	
SWIM								
In the Prep Pl	nase you sho	uld be focus	ing on Swim	Technique. Ev	erybody can	improve the	eir	
Technique an	d particularl	y if you have	e been out of t	the water duri	ng the winter	. I would spe	end	
about 30-50%	of you wor	kout focusin	g on form (S	LOWLY). Ma	ybe hire a sv	vim coach.		
BIKE								
Workouts dur	ing the weel	can be Spir	n Class or wo	rk on a trainer	. Everybody	can		
benefit from t	his early sea	son. Spin is	good for leg s	speed.				
* There are se	everal long h	ills on the b	ike course so	you should try	to practice l	hills		
or standing cl	imbs in a Sp	oin Class or o	on a Trainer.					
Tough in a sp	in class but	you Heart ra	te Zone does	not need to go	above Zone	2-3 or RPE	4-6	
on a scale of	1-10							
RUN								
All run worke	outs are at a	very easy co	nversational p	pace Heart Ra	te Zone 1-2	or RPE 2-4		
There is no pr	roblem with	you starting	this program	walking or wa	alk/jog. Forg	et speed.		
The Asterisk	s * in week	4 are useful i	in the sense th	at after 4 wee	ks you can n	neasure your		
performance	for future tes	sts and moni	tor your impro	ovement.				
Swim * - Afte	er 4 weeks o	f swimming.	, see how far y	you can swim	continuously	Record tha	t.	
Run * - Not	a speed test	t, but you ma	ay be able to r	un for the who	ole 30 minute	es?		
Bike - No t	est yet.

HEART RATE ZONES									
In the commentary below you will see referance to Heart Rate Zones. Usually Zones 1-5 are used or									
RPE (Rate of Perceived Exertion) 1-10. If you have had a Lactate Threshold Test you will know your									
Heart Rate Training Zones.									
STRENGTH									
Aerobic warm up for 10 minutes before and cool down after exercises. Stretch after (and every day).									
After Prep phase of weight training with very light weights with 15-20 reps you can now move to									
Strength Maintenance Phase. You can increase your weights by 5% each week. A weight that you can									
rep 10-15 X. Ask an instructor to show how to properly lift if you aren't sure.									
SWIM									
You can continue to focus on Swim Technique. A good Technique is the best way to get through									
the swim. A Wetsuit is going to help you. You can start longer swim repetitions. If you have been									
swimming 100 repeats, step up to 200's. Your weekend swim could be a continuous swim									
BIKE									
Workouts during the week can be Spin Class or work on a trainer. Everybody can									
benefit from this early season. Spin is good for leg speed									
* There are some tougher hills at the start of the bike course so you should try to practice hills									
or standing climbs in a Spin Class or on a Trainer.									
Tough in a spin class but you Heart rate Zone does not need to go above Zone 2-3 or RPE 4-6									
on a scale of 1-10.									
RUN									
All run workouts are at a very easy conversational pace Heart Rate Zone 1-2 or RPE 2-4									
There is no problem with you starting this program walking or walk/jog.									
Just keep working on endurance and building up your longer run at the weekend.									
The Asterisks * in week 8 are useful in the sense that after 4 weeks you can measure your									
performance for future tests and monitor your improvement.									
Swim * - After 8 weeks of swimming, see how far you can swim continuously . Record that.									
Run * - Not a speed test, but you may be able to run for the whole 30 minutes?									
Bike * - How far can you Bike in 1 Hour?

I would be very interested to know how you	u did in your fi	rst race and if you sta	yed fairly						
close to your Plan. If you have been keepin	g to the plan a	nd your fitness levels	have						
improved, you can now put in some accelerations into your workouts but make sure you									
recover between your efforts. Save it for the Race!									
If you are still worried about the swim, you	still have time	to practice relaxing a	and also to						
practice swimming in a wetsuit in open wat	er. Make sure	you are swimming wi	th others.						
**I hope you manage to do the BRICK wor	rkout so that no	ow you will know wh	at your						
legs will feel like when you get off the bike	. If you haven'	t done one yet I'd reco	ommend this						
last one. Also, ** the day before race day is	a chance for y	ou to check the nuts a	and bolts and						
tires on your bike, and then go for a short ru	un and short tu	ne up swim.							
NUTRITION/HYDRATION									
On your longer workouts of 45 minutes or 1	more, you shou	ald be drinking fluids	and it is						
better to drink an electrolyte like Gatorade	or something s	imilar. Your Triathlon	is going						
to be a long workout of around 1 1/2 hours	or more and yo	ou will also need som	e carbs to fuel						
your effort. Practice eating an energy bar or	n the bike or m	aybe a GU gel.							
STRENGTH									
We've stopped the strength workout in this	last 2 weeks to	give your muscles a	chance for						
full recovery and now you can just focus or	ı your race spe	cific workouts.							
You can continue your core ab workouts wh	nich I generally	y do every day.							
SWIM									
You should still be focusing on Swim Techn	nique. Everybo	ody can improve their							
Technique. Your aim is to finish this swim a	and feel relaxed	d for the bike.							
Continue to spend about 30-50% of you wo	rkout focusing	g on form (SLOWLY)) unless you aı	e					
a good swimmer already. Maybe hire a swin	m coach. Try o	pen water swimming	. Relax.						
If your swimming is going well, practice so	me fast 50's w	hich will raise your he	eart rate						
to a level close to what you will feel at race	start. Come to	our Swim Clinic.							
BIKE									
Stationary bike and spin classes are OK but	you should try	y to experience hills o	utdoors.						
Your Heart rate Zone can go to Zone 3-4 or	RPE 6-8 on a	scale of 1-10 on the h	ills.						
Try to stay seated on hills to build your leg	strength.								
RUN									
If you are able to run 30 - 45 minutes and y	ou feel comfor	table you can start to	put in some						
20 - 30 second acceleration and then recove	er.If you still ha	ave problems running	don't worry.						
There is no rule against walking in a race an	nd your aim is	to finish.							
You are just building the amount of time that you run or walk for at a very easy pace.									

Just keep moving for the designated time.									
Lastly for rac	Lastly for race day, look at the What to Remember on Race Day on the Race website								
as that will he	as that will help you to remember everything you need on race day.
